

LS 2003 Leak Detector Tester

Basic 3.0 gal/h Kit

- Liquid and Vapor Tight Cases (2)
- Precision Flowmeter for 3.0 gal/h
- Graduated Cylinder for Calibration
- Stopwatch
- Pressure Gauge
- Hose to Dispenser
- Quick Connects for Shear Valves (3)
- Purge Valve Assembly
- Training

Optional Equipment for Small Leaks

- Precision Flowmeter for 0.1 and 0.2 gal/h
- Graduated Cylinder for Calibration
- Training for Small Leaks

Construction Materials

- All Components of these kits are premium quality obtained from recognized industry suppliers
- Warranty on all parts and labor for one year

TRAINING FOR LS-2003 LEAK DETECTOR TESTER

The LS-2003 Leak Detector Tester is a precision instrument that is capable of accurately generating leaks of 3.0 gal/h, 0.2 gal/h and 0.1 gal/h. To achieve the best possible results from the LS-2003, it is mandatory that this equipment be calibrated and used properly.

To assure that the best possible results are obtained from the LS-2003, KWA strongly recommends that users be properly trained. This training can be obtained either at the KWA Laboratory in Grain Valley, Missouri (near Kansas City) or at the users site.

Training at the KWA laboratory includes actual use of the equipment on several of the more popular leak detectors. These leak detectors are installed on the KWA test pipeline and are fully functional as they would be at a service station site. Users will be able to see exactly what to expect when the LS-2003 is used in the field. The sequence of events that occurs during a test is often complex with the turbine pumps turning on and off periodically as the test is conducted. Complete notes describing these events will be provided at the course. In addition to hands-on use of the LS 2003, a session on maintenance of the equipment will also be provided. This will include replacement of o-rings and cleaning of the flow tubes.

Training can also be conducted at the user site. If this option is selected, it is highly recommended that one or more lines with different leak detectors be available for the training. If not, video examples can be provided for the students.

One user can be trained at no cost with purchase of each unit. Additional personnel can be trained for a nominal charge. A certification card with the testers name, serial number and picture will be provided after successful completion of the training.
